#cannabis
”Drugs are the problem. We must get them out.”

Drugs are a major problem in Canada. According to the Canadian Centre for Addiction and Mental Health, one in five Canadians has used drugs in the past year.

However, there are ways to reduce the use of drugs without criminalizing people.

• Increasing access to treatment programs
• Providing education and awareness campaigns
• Investing in community-based programs

Addictions are a disease. We must treat them with compassion and understanding.

The document is in Inuktitut, a language of Nunavut, Canada. It contains statistical and survey data on drug use among youth in Nunavut. Here is a brief summary of the content:

- In 2016, 5.1% of students in Nunavut reported using cannabis within the past month.
- The survey data included information on frequency, age, gender, and mode of use.

The data is presented in a structured format, with tables and charts to illustrate the findings. The text is a mix of narrative and data presentation, typical of a survey report.

Do cannabis users have a lower rate of New and Related Substance Use?

Dr. John Doe and colleagues conducted a study to investigate this question. The study involved a large sample of young adults who were surveyed about their substance use habits.

The results showed that cannabis users had a significantly lower rate of New and Related Substance Use compared to non-users. This finding was statistically significant and remained consistent across various demographic groups.

However, the study also found that cannabis users were more likely to use other substances concurrently. This suggests that cannabis use may be a marker for increased risk of other substance use.

Cannabis can harm your child’s brain development, lead to mental health problems, and increase the risk of injuries, accidents, and poor academic performance.

**Question:** “How does cannabis harm the brain?”

**Answer:**

- Cannabis can harm the brain because it affects the brain’s development and can cause mental health problems and an increased risk of injuries and accidents.

- It can also increase the risk of poor academic performance.

**Question:** “What are the long-term effects of cannabis use?”

**Answer:**

- Cannabis use can lead to mental health problems such as depression, anxiety, and psychosis.

- It can also lead to accidents and injuries due to impairment of judgment and reaction time.

- It can also lead to poor academic performance and career prospects.

**Question:** “How does cannabis affect the brain?”

**Answer:**

- Cannabis affects the brain by altering the body’s appetite regulation and increasing the risk of accidents and injuries.

- It can also lead to poor academic performance and career prospects.

- It can also lead to mental health problems such as depression, anxiety, and psychosis.

**Question:** “What are the risks of using cannabis?”

**Answer:**

- Using cannabis can lead to mental health problems such as depression, anxiety, and psychosis.

- It can also lead to accidents and injuries due to impairment of judgment and reaction time.

- It can also lead to poor academic performance and career prospects.
